Vishwa

AWS DevOps Engineer | Terraform | Kubernetes | CI/CD | AWS | Azure | Docker
+91-8501037965 | vishwaawsdevops.8288@gmail.com | LinkedIn: vishwa-aws-devops

PROFESSIONAL SUMMARY

• DevOps Engineer with **7+ years of IT experience**, including **5+ years specializing in cloud and DevOps practices** across **AWS and Azure environments**
• Strong expertise in **designing, automating, and managing** scalable, highly available, and secure **cloud infrastructure** in production environments using AWS and **Kubernetes**
• Proficient in **Infrastructure as Code (IaC)** using **Terraform** for provisioning and managing infrastructure across production, disaster recovery, and test environments
• Hands-on experience in **containerization and orchestration** using **Docker** and **Kubernetes** (**EKS**, **AKS**) for deploying microservices-based applications
• Extensive experience in **building and managing CI/CD pipelines** using **Jenkins, GitHub, GitLab CI,** Bamboo, and Maven
• Skilled in **configuration management and automation** using **Ansible, Chef, and Puppet**
• Strong experience with AWS services including **EC2, VPC, IAM, S3, RDS, DynamoDB, Lambda, API Gateway, CloudFormation, CloudFront, SNS, SQS, ELB, and Auto Scaling**
• **Proficient in monitoring, logging, and performance tuning** using **CloudWatch, ELK Stack, Prometheus, and Grafana**
• Experience working with **DevOps and security tools** such as **SonarQube, Veracode, JFrog Artifactory, Nexus**
• Strong background in **Linux system administration**, **shell scripting (Bash),** and **Python scripting** for automation
• Experience with **database technologies** including **MySQL, PostgreSQL, Cassandra, and AWS RDS**
• Familiar with **Agile methodologies** and experienced in working with tools like **JIRA and Confluence**
• Proven ability to **collaborate with cross-functional teams** to deliver **reliable, scalable, and high-performance solutions**

TECHNICAL SKILLS

CLOUD: AWS, Azure
DEVOPS & CI/CD TOOLS: Jenkins, GitLab CI, Bamboo, Maven, Ant, Nexus
VERSION CONTROL: Git, GitHub, Bitbucket
IAC: Terraform, CloudFormation
CONFIG MANAGEMENT: Ansible, Chef, Puppet
CONTAINERIZATION & ORCHESTRATION: Docker, Kubernetes (EKS, AKS)
SCRIPTING & PROGRAMMING: Python, Shell Scripting (Bash), PowerShell
MONITORING & LOGGING: AWS CloudWatch, Nagios, ELK Stack, Prometheus, Grafana
DATABASES: MySQL, PostgreSQL, Oracle, Microsoft SQL Server, MongoDB
APPLICATION SERVERS: Apache Tomcat, JBoss, WebSphere
TESTING & QUALITY TOOLS: JUnit, Selenium
TICKETING & COLLABORATION: JIRA, ServiceNow, Confluence
OPERATING SYSTEMS: Linux/Unix, Ubuntu, Windows
IDES & EDITORS: VS Code, Eclipse, PyCharm
ADDITIONAL TOOLS / SKILLS: Docker Compose, Helm, Artifactory, Slack

PROFESSIONAL EXPERIENCE

Proclink Consulting Services LLP | AWS DevOps Engineer

Sep 2023 – Dec 2024 | Client: OneMain Financial
Project: PowerCurve Originations – Credit Decisioning Automation Platform
Project Description: PowerCurve Originations is a credit decisioning platform used by financial institutions to automate loan origination, risk assessment, and approval workflows. It integrates with external credit bureaus such as Experian and Equifax to provide real-time decisioning and improve customer onboarding efficiency.

Key Responsibilities:

• Managed **AWS cloud resources (EC2, S3, IAM, VPC)** for application deployments
• Designed and implemented **CI/CD pipelines** using **Jenkins and GitLab CI** for automated deployments
• Automated infrastructure provisioning using **Terraform and Ansible (IaC)**
• Managed microservices using **Docker and Kubernetes** for scalable architecture
• Implemented monitoring using **Prometheus, Grafana, and ELK Stack**
• Collaborated with **development and QA teams** to streamline CI/CD workflows
• Implemented security using **HashiCorp Vault** and vulnerability scanning tools
• Supported **zero-downtime deployments**

Key Technologies:
AWS, Terraform, Ansible, Jenkins, GitLab CI, Docker, Kubernetes, Prometheus, Grafana, ELK Stack, Python, Shell Scripting, HashiCorp Vault, SonarQube

Impact:
• Reduced deployment time from **2 hours to 10 minutes** through CI/CD automation
• Improved system uptime to **99.99%** using Kubernetes-based high availability strategies
• Enhanced **infrastructure security and compliance** across environments

Sonata Software | AWS DevOps Engineer

May 2020 – Aug 2023 | Client: Revolut (Banking and Financial Services)
Project: Digital Banking Platform – Cloud-Native Microservices
Project Description: Worked on a cloud-native digital banking platform supporting payments, account management, and transaction processing. The system was built on a microservices architecture, handling high-volume real-time transactions with a focus on scalability, security, and high availability.

Key Responsibilities:

• Implemented **DevOps and SRE practices** for large-scale distributed applications
• Worked in **Agile/Scrum environments,** collaborating with **cross-functional teams**
• Integrated **JIRA with Jenkins** for automated deployment tracking
• Performed **Cassandra performance tuning** using stress testing
• Managed **relational and NoSQL databases**
• Automated **AWS infrastructure** using **Python, Terraform, and CloudFormation**
• Implemented backup strategies using **AWS CLI (AMI, EBS snapshots)**
• Developed and optimized **CI/CD pipelines** for automated deployments
• Worked with **Ansible and Puppet** for configuration management

• Designed **Azure ARM templates** and automated Azure services
• Managed **networking protocols and secure connectivity**

Key Technologies:
AWS (EC2, S3, EBS, IAM, Lambda, CloudFront, ELB), Azure, Terraform, CloudFormation, Ansible, Puppet, Jenkins, Bamboo, Git, Python, Shell Scripting, Docker, Cassandra, MongoDB, DynamoDB, MySQL, PostgreSQL, DB2, AWS CLI, PowerShell, JIRA, Confluence

Impact:
• Reduced deployment effort by **70%** using **IaC and CI/CD pipelines**
• Improved **system reliability** through automated backup and monitoring solutions
• Optimized **database performance** via Cassandra tuning
• Accelerated **release cycles** through automation
• Strengthened **cloud security** using IAM and encryption practices
• Improved **operational efficiency** through scripting and automation
• Enhanced **collaboration** using JIRA integrations

ValueLabs | Associate Software Engineer
Oct 2017 – Apr 2020 | Client: HCA Healthcare (Healthcare Domain)
Project: Healthcare Application Support & Infrastructure Management
Project Description: Supported critical healthcare applications used for patient data management, scheduling, and internal operations. Ensured system availability, performance monitoring, and incident resolution in a production environment with strict compliance and security standards.

Key Responsibilities:
• Managed **production incidents** using **PagerDuty and JIRA**
• Monitored **server and application performance**
• Administered **Windows OS and Active Directory services**
• Automated **administrative tasks** using **PowerShell**
• Installed and configured **applications and servers**
• Used **Nagios** for monitoring and alerting

Key Technologies:
Windows Server, Active Directory, PowerShell, Nagios, JIRA, PagerDuty, Linux, Networking (TCP/IP, DNS)

Impact:
• Improved incident response time by **30%**
• Enhanced **system uptime** through proactive monitoring
• Reduced **manual effort** via PowerShell automation
• Strengthened **user access security** using Active Directory
• Streamlined **onboarding and provisioning processes**

EDUCATION

• **Master of Business Administration (MBA), Osmania University –** 2011
• **Bachelor of Science (BSc - BZC), Kakatiya University –** 2009
